

T A A T T A G C

A stylized DNA double helix structure is shown below the text. The structure consists of two strands, one green and one blue, connected by horizontal base pairs. The base pairs are colored to match the letters above them: A (green) pairs with T (red), G (yellow) pairs with C (blue). The strands are represented by thick, slightly curved lines. The base pairs are shown as horizontal bars of varying lengths, with some segments highlighted in red and green. The overall structure is a simplified representation of a DNA molecule.
