

GGGCAGTTAG

The image displays a DNA double helix structure. The top strand is composed of the following bases from left to right: a yellow 'G', a yellow 'G', a blue 'C', a green 'A', a yellow 'G', two red 'T's, and a green 'A'. The bottom strand is composed of the following bases from left to right: a red 'C', a red 'C', a blue 'G', a yellow 'G', and a yellow 'G'. The bases are connected by horizontal lines representing hydrogen bonds. The top strand is slightly offset to the right relative to the bottom strand, creating a staggered appearance. The colors of the bases are: yellow for Guanine (G), red for Cytosine (C), green for Adenine (A), and blue for Guanine (G).
