

Sequence logo showing the conservation of nucleotides across 10 positions. The bases are color-coded: G (orange), C (blue), A (green), and T (red). The height of each letter indicates its relative frequency at that position.

| Position | Base | Relative Frequency (Height) |
|----------|------|-----------------------------|
| 1        | G    | High                        |
| 2        | C    | High                        |
| 3        | C    | High                        |
| 4        | A    | High                        |
| 5        | C    | High                        |
| 6        | T    | High                        |
| 7        | C    | High                        |
| 8        | A    | High                        |
| 9        | A    | High                        |
| 10       | G    | High                        |
