

CGGCAGGC GG

The image shows a DNA double helix segment. The top strand is composed of the bases C, G, G, C, A, G, C, G, G. The bottom strand is composed of the bases G, C, C, T, G, C, C, A, A. The bases are color-coded: C is blue, G is orange, A is green, and T is red. The double helix is shown in a perspective view, with the strands curving upwards and outwards. The bases are connected by horizontal lines representing hydrogen bonds. The overall structure is a right-handed helix.
